¹The incidence rates represent the number of injuries and illnesses per 100 full-time equivalent workers and were calculated as: $(N/EH) \times 200,000$, where

N = number of injuries and illnesses

EH = total hours worked by all employees during the calendar year

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year)

²Totals include data for industries not shown separately.

³North American Industry Classification System -- United States, 2017

⁴Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

⁵Excludes farms with fewer than 11 employees.

⁶Less than 15 cases

⁷Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

The scope of the data published in the SOII differs from the scope of the data published by the FRA.

For more information on differences see the SOII Handbook of Methods Data Concepts page: <https://www.bls.gov/opub/hom/soii/data.htm>.

⁸Relative standard errors were not calculated for mining, except oil and gas (NAICS 212), and rail transportation (NAICS 482).

NOTE: Because of rounding, components may not add to totals. Dash indicates data do not meet publication guidelines.
